# Starting with Lambda Functions

Fernando Medina Corey SOLUTIONS ARCHITECT @fmc\_sea www.fernandomc.com

### Outline

#### **Considerations and limitations**

- Languages and runtimes
- Size and resource limitations
- Other considerations

#### Lambda prerequisites

- Gathering dependencies
- Writing code
- Function packages
- Debugging

#### Deploying our Lambda canary

- Walkthrough

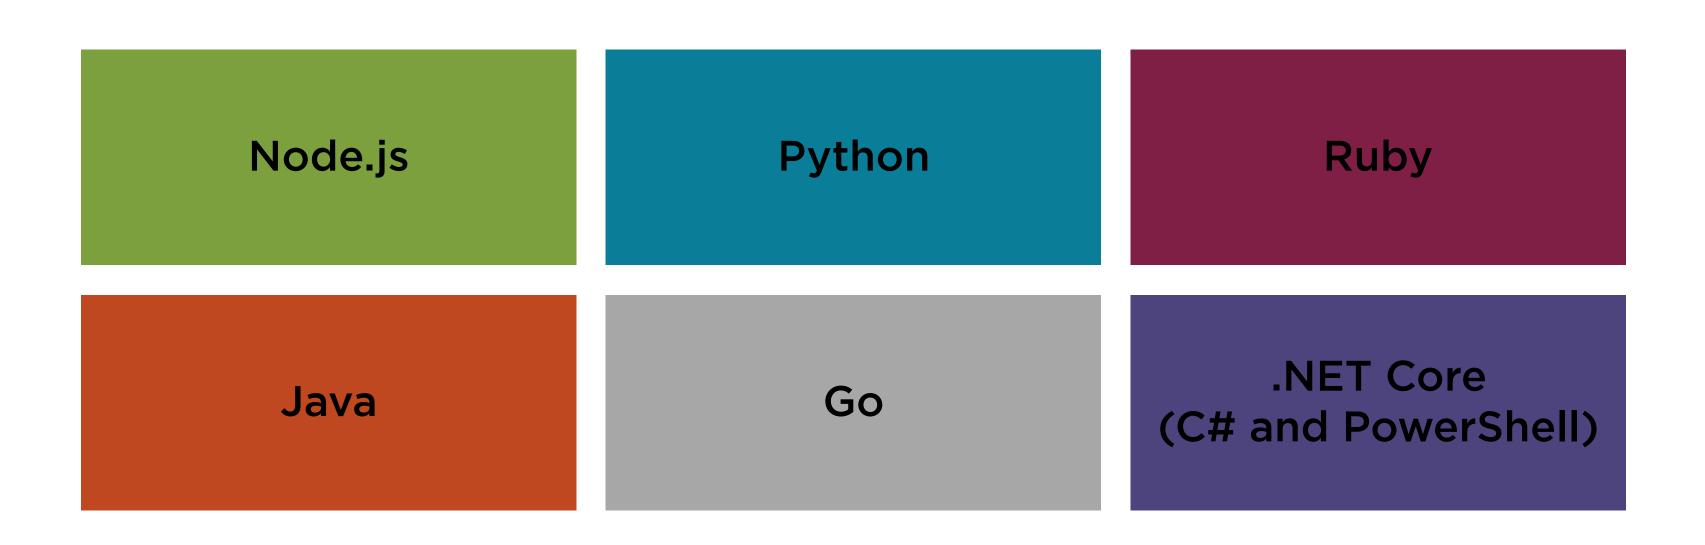

### Considerations and Limitations

### Languages and Runtimes

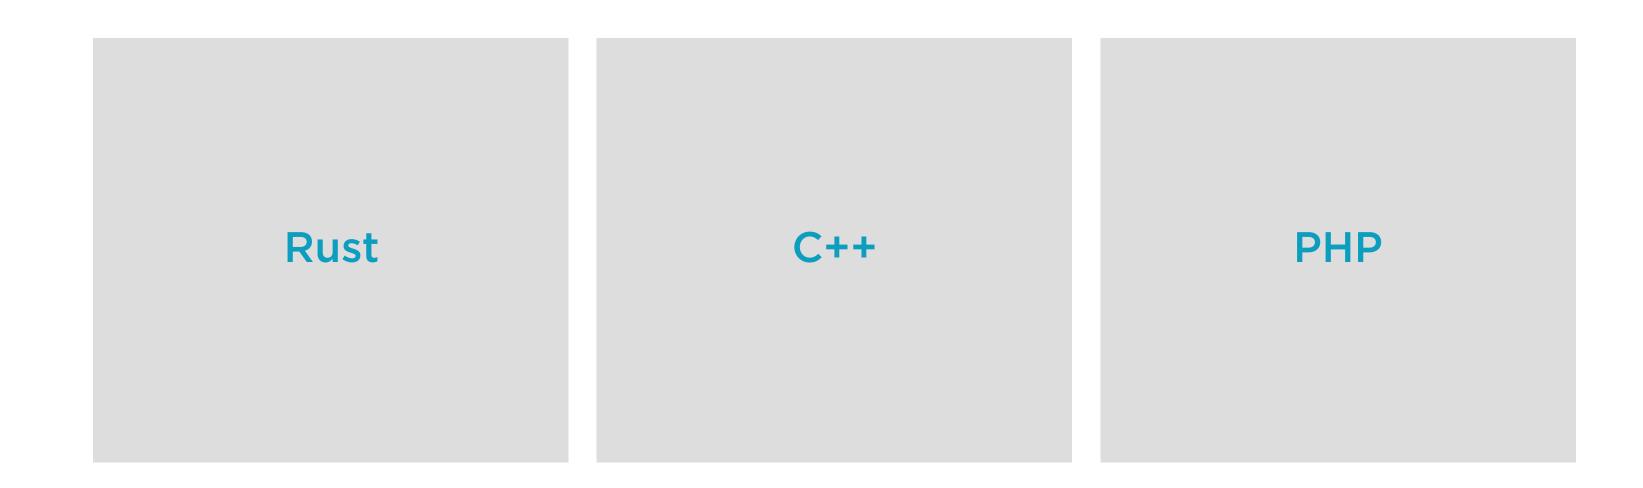

Example languages: Python, Node.js, Java, Go

Example runtimes: Python 3.8, Node.js 12.13.0

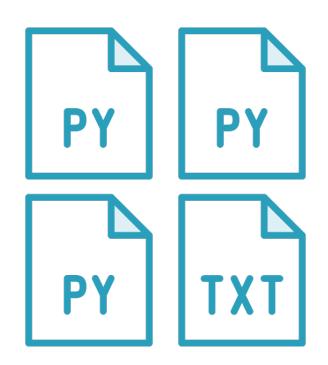

### AWS-managed Languages and Runtimes

### Custom Runtimes

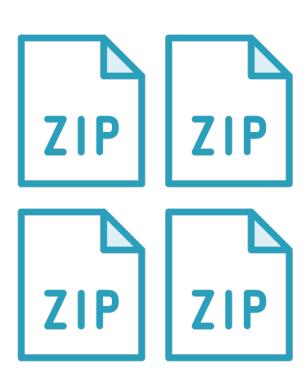

### Size Limitations

Uncompressed code & dependencies < 250 MB

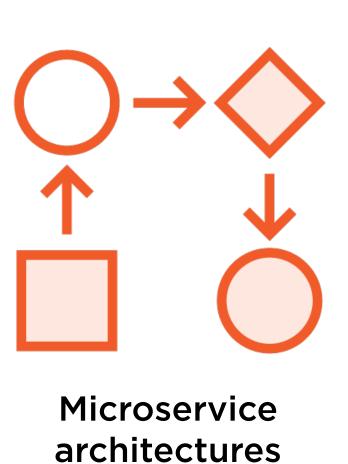

Compressed function package < 50MB

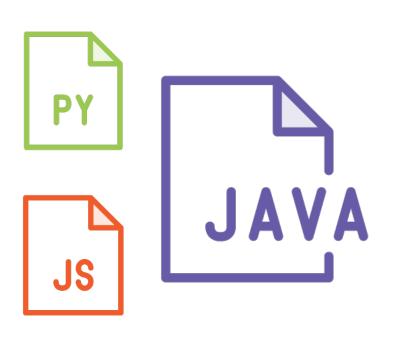

Total function packages in a region < 75 GB

### Size Limitations - Workarounds

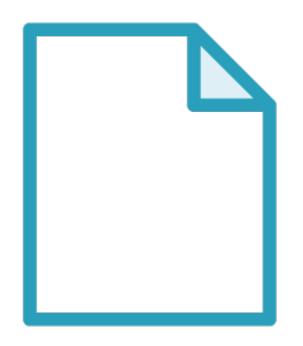

Other runtime options

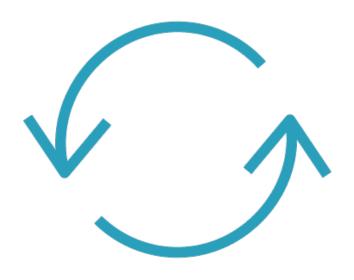

### Resource Limitations

Ephemeral storage < 512 MB

Maximum execution duration < 900 seconds

Concurrent Lambda functions < 1000

### Resource Limitations - Workarounds

Load and store files in S3

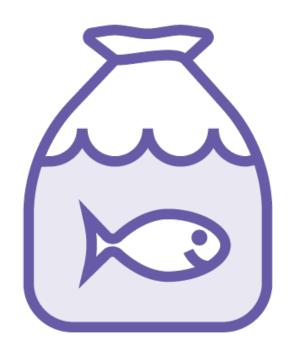

Chain functions together

Ask AWS about increasing limits

## Memory, CPU and VPC

Memory 128 MB - 3 GB

CPU scales with memory

Virtual Private Cloud

#### AWS Lambda Considerations

**Event driven code** 

Code size limitations

Lambda as a component

Performance limitations

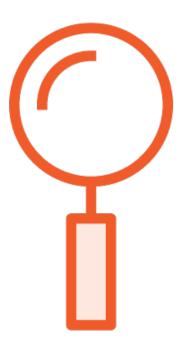

Long running workloads

# Lambda Prerequisites

# Lambda Canary

Set run interval

Function reviews website

Website status recorded

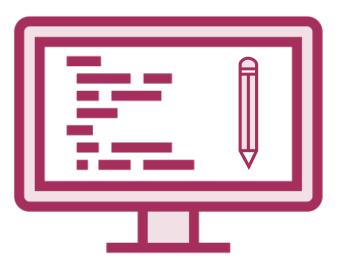

## Gathering Dependencies

# Writing Code

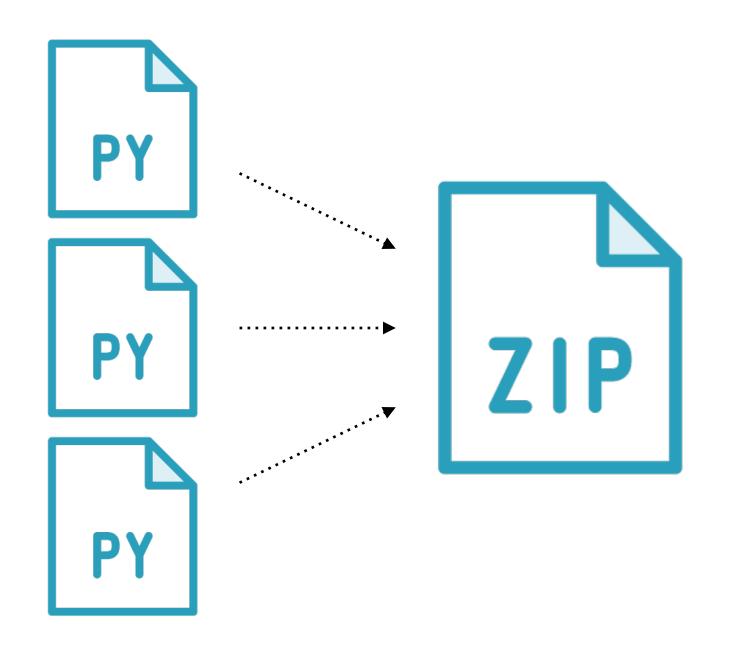

Locally

In AWS editor

# Creating a Function Package

### Debugging

Use logging and CloudWatch
Environment differences
Search for your issues
Consider 3rd party tools

#### Demo

#### Deploying the Lambda Canary

- Create a function from a blueprint
- Configure CloudWatch schedule
- Modify the Python function
- Adjust function settings
- Configure a default test
- Review our function results

### Summary

#### What we've done

- Understood Lambda's limitations
- Learned workarounds for limitations
- Deployed first Lambda function
- Setup alerting and monitoring

#### What's next?

- Integrating Lambda & 3rd party APIs
